

LIFE IS FOR SHARING.

# DYNAMIC VOICE EXCHANGE

## Dynamic Voice Exchange (DVX)

Access to our high-performance global voice network is now quicker and easier than ever before, thanks to our solution from Deutsche Telekom Global Carrier Dynamic Voice Exchange (DVX).

If you're looking for an efficient means of extending both your international voice footprint as well as service quality, DVX is the answer. It offers fast access to our premium network without the difficulty of negotiating and filling complex contracts. Voice termination to any destination worldwide can be immediately and securely obtained, with all the benefits of working with a strong, Tier 1 provider.

## Fast, transparent, cost-effective

DVX is an intelligent solution that provides extra-quick connectivity to Deutsche Telekom's worldwide network. It is a pay-as-you-go service that keeps management exclusively in your hands over an online, 24/7 platform. This gives you complete control over your assets, allows over-the-air management of the service and dispels concerns about spending more than is available. From our side, the solution eliminates the need for complicated and laborious contractual guarantees.

A few simple steps are all that's necessary to take advantage of Deutsche Telekom's global voice network. Over our secure web portal, simply register and complete a basic agreement – and then deposit funds into your own, segregated trust account.

A secure, top-rated international bank holds the funds, while withdrawals or even cancellation of services are possible at any time, without penalty.

## Expand Global Connectivity

After registration, our global routes are immediately visible. You can then buy routes, add IP addresses and easily manage billing. In addition, online, real-time reports are generated, which give insights into statistics such as Average Call Duration (ACD) and Answer Seizure Ratio (ASR). This transparency provides the best-possible means for managing ever-increasing volumes of service while keeping close track of expenditures.

## A Tier 1 provider

With DVX, our customers enjoy the most efficient means of extending both their international footprint and service quality. In addition, thanks to our IP-PoPs in Hong Kong, New York and Frankfurt, based on our Next Generation Voice International (NGVi) platform, routing has never been more efficient. You can rely on the financial strength of Deutsche Telekom, which ensures our commitment to continual network expansion.

## Highlights:

- Expand international voice footprint quickly and easily
- Pay-as-you-go service
- Customers control and manage own funds, 24/7
- Simple: buy routes, add IP addresses, online reporting and billing
- No complex contract negotiations
- Secure, top rated international bank
- Fully compatible with smartphones and tablets
